Profile	I am a software engineer specializing in creating websites and mobile apps. For the past 8 years, I have been immersed in the world of software development, including 3 years of commercial experience. I am dedicated to delivering results and ensuring client satisfaction is my top priority. I like to do: writing code, conducting code reviews, ensuring test coverage, debugging, mentoring team members, maintaining projects, optimizing performance, implementing new features, collaborating with cross functional teams, documenting code and processes, managing version control, ensuring security compliance, providing technical support, participating in design discussions.

Technology Stack

Frontend	Backend	Deployment	Databases	CI/CD	Web Servers	Testing
React	PHP	AWS	MySQL	Jenkins	Nginx	Unit Testing
Vue	Java	Firebase	SQLite	GitHub Actions	Apache	UI Testing
Angular	.Net	Google Cloud Platform	MySQL	GitLab CI/CD	Caddy	Test Automation
Bootstrap	Python	Microsoft Azure	PostgreSQL	CircleCI		
JavaScript	Node.js	DigitalOcean	MariaDB			
HTML	Express	Heroku	Firebase Realtime			
RxJS	NestJS		Redis			
SCSS						
Tailwind						
NgRX						

Employment history

Jun 2024 – Now

Company: Condor Gaming

Role: Full Stack Developer

Project: Gambling. Casino, Slots, Sportsbook services.

Stack: HTML, JS, Vue.js, jQuery, Bootstrap, PHP, SCSS, Lazy Load, MariaDB, MySQL, Jenkins, Apache, DigitalOcean.

Contribution: Page design, Request creating, Database management, Service communication maintenance, new functionality implementation, lazy loading setup, bug fixing.

Apr 2024 – Jul 2024

Company: Radency

Role: Full Stack Developer

Project: Event Planner. Developed a tool for users to organize and manage events, including features for searching venues, managing guest lists, and scheduling activities. The tool also provided personalized event suggestions based on user preferences.

Stack: Angular, Java, REST, Postman, Tailwind CSS, Docker

Contribution: Designed system architecture, SCRUM, set up network infrastructure, created custom UI components, implemented response caching, and developed algorithms for date optimization.

Jan 2024 – Apr 2024

Company: Radency

Role: Full Stack Developer

Project: Lifestyle Assistant. Created an application that offers lifestyle recommendations, including daily health tips and outfit suggestions based on current weather conditions. The app features interactive elements, allowing users to swipe through different tips and outfit options, with the ability to customize based on personal preferences.

Stack: React, .NET, REST, Postman

Contribution: Designed system architecture, SCRUM, set up network infrastructure, developed custom UI components, implemented response caching, and created algorithms for dynamic clothing and gender options.

Jul 2023 – Jan 2024

Company: Radency

Role: Full Stack Developer

Project: Health system for hospitals, patients and doctors.
Developed from scratch.

Stack: NodeJS, Express/NestJS, REST, Swagger, TypeScript, React, Redux, Tailwind CSS, Storybook, Chromatic, RabbitMQ, JWT, PostgreSQL, Sequelize, Redis, Docker.

Contribution: system architecture design, authorization logic, custom UI components, realtime chat, AI assistant, documents scanner, code review.

Dec 2021 – Jul 2023

Company: Blackberry

Role: iOS Software Engineer

Project: Mobile application support.

Stack: Objective C, Swift, XCTest, Testflight, logger.

Contribution: authorization logic, test coverage, bug fixing, device debugging, code review, Objective-C to Swift migration, refactoring.

Jun 2021 – Dec 2021

Company: Epam

Role: iOS Software Developer

Project: Food ordering application.

Stack: Swift, Figma, Programmatic layout, API, Mocking, XCTest.

Contribution: login features, load products to menu, adding products to cart, profile information, address configuration, phone number confirmation, credit cards management, architecture design, UI elements, API calls, code optimization, lint setup, proceeding with bucket, menu page, code review.

Feb 2021 – Jun 2021

Company: Epam

Role: iOS developer

Project: Support iOS projects.

Contribution: SwiftUI lists, API based applications, notification center, advanced folder structure and persistent CoreData storage, quick fetch mechanisms, photo structuring and editing functionality, animations and mobile games, drawing, UI class adaptation for wide range screen resolutions, advanced search and filtering, code review.

Past Projects

Jul 2024 – Aug 2024

Area: Graduation Project

Role: Full Stack Developer

Project: Scantechnic Device Managment Tool.

Description: Developed a system for managing IoT devices using a modified Long Short-Term Memory (LSTM) model. This tool detects complex anomalies in temperature data from IoT devices and regulates these anomalies by controlling a fan. The system includes real-time monitoring and control interfaces, and employs a modified algorithm to ensure data protection and device stability.

Stack: Python, ML, Neural Networks, Angular, typescript(server), Arduino IoT, algorithms improving & inventing.

Contribution: The overall system architecture was designed to ensure seamless integration between IoT devices and the anomaly detection model. Network infrastructure was set up to support real-time data processing and communication. Custom user interfaces were developed for monitoring and controlling the IoT devices, and response caching mechanisms were implemented to enhance system performance and reliability. Machine learning algorithms, specifically a modified LSTM model, were applied to detect and manage temperature anomalies effectively.

Sep 2018 – Jul 2021

Area: Freelance

Role: Web Developer

Project: Website Development

Description: Developed custom websites from scratch for various clients, ensuring pixel-perfect designs and responsive layouts. Projects involved both frontend and backend development.

Stack: WordPress, Figma, HTML, JavaScript, TypeScript, Angular, React, PHP, CSS, Node.js, Bootstrap, MySQL, Firebase, Docker, Redis.

Contribution: Designed and developed websites, met client requirements, and leveraged a diverse technology stack to deliver high quality web solutions.

Jan 2016 – Sep 2018

Area: Self-Initiated Projects

Role: Software Developer

Project: Various Personal and Educational Projects

Description: Created a range of personal and educational projects, including mobile and web applications, as part of self-initiated and course-based work.

Stack: Pascal, Python, Java, Swift, Objective-C, HTML, JavaScript

Projects: WeatherWear (iOS App), LinkCollector (iOS App), HitToMeet (Web App), WearPlan (Web-IoT-Mobile System), FollowAction (Web-IoT-Mobile System), CryptoWallet (iOS App),

News (iOS App), Weather (iOS App), Caffé (iOS App)

Contribution: Designed and developed diverse applications, engaged in programming competitions, and utilized multiple programming languages and frameworks to build functional and innovative solutions.

Education

Sep 2022 – Jun 2024	School: Kharkiv National University of Radio Electronics Field of study: Software Engineering Degree: Master of Computer Science Disciplines: Tests Coverage, Tests Automation, Computer Vision, Advanced Math, System Optimization, Graph Theory, and Scientific Research. Additionally, I delved into Business Management, Probability Theory, Philosophy, Function Optimization, and Algorithm Development. My coursework also included Big Data, Neural Networks, and Embedding AI Functions in Software. One significant aspect of my research focused on exploring anomaly detection methods in IoT data, which involved a comprehensive comparison of existing solutions for detecting anomalies in complex datasets, such as those generated by IoT sensors.
Sep 2018 – Jun 2022	School: Kharkiv National University of Radio Electronics Field of study: Software Engineering Degree: Bachelor of Computer Science Disciplines: JS development & algorithmical thinking, discrete math, software development practises, .Net developing, .Net Core developing, Windows forms, advanced algorithms, architecture patterns, database management, building advanced sql queries, networking protocols, debugging and prototyping network, websites development, websites hosting, javascript frameworks(React, Angular), IoT, Mobile development(iOS, Android), High standard industry projects(including several user roles, complex database design, algorithms development, linking multiple platforms to work in one system: IoT smart device, mobile application, Desktop, Website application. All of those has access to internet and can be sold as a system for a tech company or to a chain of stores).
Sep 2016 – Jun 2018	School: Kharkiv Gymnasium №82 Degree: Complete secondary education
Sep 2007 – Jun 2016	School: Kharkiv Gymnasium №82 Degree: Basic secondary education
